

Pure COTTON

This is the most widely used material for bed linen as it is durable, long-lasting and easy to launder. It is renowned for its natural breathability which makes it very comfortable to sleep in. The Sofa & Chair Company offers 100% cotton ranges including cotton percale and cotton sateen. All bedding ranges have been sourced through Italian mills and made in Italy using the finest cotton yarns.

- **Cotton Sateen:** Extremely luxurious composition with a silken touch and beautiful sheen.
Care: Despite its delicate nature, cotton sateen is machine washable but needs to be handled with great care. Also suitable for ironing.
- **Cotton Percale:** Lightweight, smooth and matte in its appearance.
Care: Cotton percale is more durable than cotton sateen. This finish is machine washable and easy to iron.

Egyptian COTTON

Egyptian cotton is an extra-long staple yarn, making it one of the finest types of cotton. As the yarn is so long, this enables the weave of the cotton to be finer and have a softer handle and feel.

Care: Egyptian cotton sheets generally have a higher thread count, which ensures quality and comfort, making this linen a great investment. Due to the higher quality, Egyptian cotton sheets are required to be laundered with care to ensure they last for as long as possible. Egyptian cotton is machine washable and easy to iron.

Bedding CARE

Enhance the look and lifespan of your luxury bedding with these care and maintenance tips...

Just like any investment for your home, the finest quality bed linen deserves the best care and maintenance in order for you to enjoy it for as long as possible. This guide will help you understand the best ways to wash, dry, care and store your bedding depending on its unique composition and specification.

Disclaimer

Due to hygiene reasons, this product can only be returned when unused, in a resalable condition and in its original packaging. The customer will not be able to obtain a refund if the item has been used, damaged, marked or washed after the sale of the item.

Advice to Customer

Please ensure you check you are fully satisfied with your bed linen before using it. Once washed, the bed linen is non-returnable.

Please ensure bed linen is washed prior to use.

General

CARE

Wash Care

- All of our bedding is machine washable at 40 degrees (please check instructions before laundering). We recommend that all bed linen be separated into light and dark colours.
- For best results: Select a non-biological detergent containing no optical whiteners, bleaching agents or enzymes that can cause colours to fade or become patchy. We recommend that darker coloured products should be washed inside-out to prevent colour fading.
- It is advised that bed linen should be washed separately to garments with zips, hooks and buttons to prevent snagging.

Please note: All bed linen requires washing before use.

Drying

- Always check the care label to ensure tumble-drying is suitable. A low heat and medium spin is advised. If possible, do not fully dry sheets in the tumble dryer, but part-dry by hanging the sheeting.
- In order to minimise creasing, open out each sheet, shake before hanging to dry and fold neatly.

Please Note: Remember that extensive line drying in direct sunlight can cause coloured bed linen to fade

Ironing

- For best results: Iron linen while slightly damp, using a steam iron. Always iron the corners of pillowcases from the outside-in to avoid creasing.
- If the item is embroidered or embellished, iron on the reverse.

Storage

- Storage is an important part of the care and maintenance process. The best advice is to keep bedding folded flat in a dry, well-ventilated area, away from direct sunlight – a cool drawer or wardrobe is advised.
- Because it's vital for bedding fibers to breathe, please ensure your bedding is stored in a well ventilated area and not a plastic box.

Please Note: If small holes appear in the linen, please change your storage location as this is an indicator of bed bugs or moths.
